Professional Summary

Highly skilled QA Automation Engineer with over 4 years of extensive experience in designing and implementing robust, scalable test automation frameworks for both web and API testing across diverse environments. Adept in a wide range of automation domains, including UI, API, performance, and benchmark testing, with deep proficiency in Python, Selenium, and a variety of CI/CD tools. Proven track record of driving software quality improvements through both automated and exploratory testing, while mentoring teams and streamlining testing processes to deliver high-quality, reliable software in fast-paced development cycles.

Professional Experience

QA Automation Developer — RLDatix & Allocate Macedonia

Dec 2021 – Present | Skopje, North Macedonia

- Lead the development and maintenance of automated test frameworks for enterprise applications, utilizing tools such as SpecFlow, Selenium, and Python.
- Drive continuous integration by integrating automated tests into CI/CD pipelines, significantly improving the efficiency and reliability of software releases.
- Collaborate closely with product owners, developers, and other stakeholders to ensure product quality through both automated and exploratory testing practices.

Languages

- Macedonian (Native)

Fluent

- English

Fluent

- Romanian

Advanced

- Mentor junior automation engineers and contribute to process improvement initiatives, enhancing the overall quality assurance practices.

QA Engineer — Causeway Connect

Sep 2021 – Dec 2021 | Skopje, North Macedonia

- Developed and executed automated test scripts using SpecFlow and C# for various software applications, ensuring high-quality releases.
- Worked within Agile teams to contribute to sprint planning, test case design, and bug tracking, leveraging Jira for efficient collaboration.
- Supported continuous improvement by suggesting and implementing best practices for automation and testing.

QA Engineer — CRMT Digital

Sep 2021 – Dec 2021 | Skopje, North Macedonia

- Collaborated with cross-functional teams to develop automated test cases using SpecFlow and other automation tools.
- Played an active role in delivering high-quality software products by performing rigorous manual and automated testing for web applications.

QA Manual Software Tester — dimITrycode

Dec 2020 – Dec 2021 | Gevgelija, Southeastern, North Macedonia

- Conducted comprehensive manual testing of web and software applications, ensuring quality standards and requirements were met.
- Collaborated with developers and stakeholders to define test cases, report defects, and provide feedback to improve software quality.
- Gained deep familiarity with the Software Development Life Cycle (SDLC), ensuring the timely delivery of high-quality products.
